

Mikhail Razakov

C++ / LLVM Systems Engineer

misha13022008@gmail.com
t.me/Micodiy
github.com/Misha1302

I build systems and compiler components in C++23/C17/Rust: LLVM passes, memory-dependence analysis, CFG/SSA, graph algorithms, x86-64 code generation, and reproducible test oracles

LLVM / C++23

Optimization pass, graph algorithms, CMake, clang-tidy, ASan/UBSan

Conservative analysis

Conservative PS-form memory-dependence analysis with an exact oracle

x86-64 pipeline

SSA-like IR, liveness, linear scan, iced-x86, and differential validation

EXPERIENCE

- July 1 — August 31, 2026

MCST — compiler engineering intern
 - Implemented an LLVM LICM pass in C++ with conservative checks for side effects, memory access, loop invariance, preheaders, and speculative safety
 - Built a Python harness with baseline/optimized execution, opt -verify-each, and explicit CHANGE/NO_CHANGE expectations
- 2026

PS-form Memory Dependence Analyzer
 - Implemented conservative analysis of parametric memory accesses; unresolved cases do not become false yes/no answers, and correctness is checked against an independent exact oracle
 - Built an exact oracle for small domains, metamorphic tests, and reproducible WA/TL counterexamples
- 2026

x86-64 Codegen & Register Allocation Lab
 - Designed SSA-like IR, liveness, linear scan, and parity checks between an IR interpreter and generated machine code

PROJECTS

- PS-form Memory Dependence Analyzer**

Conservative yes/no/maybe results checked by an independent exact oracle on small domains, randomized/metamorphic tests, and reproducible counterexamples.
- x86-64 Codegen & Register Allocation Lab**

A reference interpreter and differential execution check generated-code semantics; the allocator assignment contract is verified independently.
- UniversalToolchain**

LanguageRuntime validates and materializes the exact planned package/component graph without re-planning; plan-determinism/exact-binding checks, ownership guards, and interpreter/CIL parity protect the contract.

SKILLS

- C++ / toolchain**

C++23, C17, CMake, Linux, clang-tidy, ASan/UBSan, GitHub Actions
- Compiler analysis**

CFG, dominance, SSA, SCC, dataflow, memory dependence, optimization passes
- Code generation**

x86-64, iced-x86, liveness, linear scan, IR interpretation, isolated execution
- Verification**

exact oracles, differential/metamorphic tests, stress testing, counterexample reduction

EDUCATION

HSE University — Software Engineering, 2026–2030

RECOGNITION

First-degree diploma and the Grand Prize “Perfection as Hope” for UniversalToolchain.
