

.NET Backend Engineer · Reliability & Operations

misha13022008@gmail.com · t.me/Micodiy · github.com/Misha1302

I design and support .NET services that must preserve correct state across retries, migrations and failures. My hands-on work includes subscriptions, payments, audit trails, background recovery, backup/restore, health checks, versioned releases and rollback. A client licensing API and Wist2 add experience with explicit contracts and subsystem-boundary validation.

Stateful services
subscriptions, payments, ledgers and devices

Safe operations
backups, health checks, versioned releases, rollback

Compiler mindset
explicit invariants and testable behavior

EXPERIENCE

- 2026 — present

Subscription-service backend and operations
VpnMediator / Razaltush VPN
 - Designed access rights, subscription and device lifecycles, a single source of truth and HMAC device binding without storing the raw hardware identifier.
 - Implemented payment state machines, idempotency, outbox, audit trail and background recovery of unfinished operations.
 - Maintained migrations, diagnostics, systemd/nginx, backup/restore, versioned deployments and health-check-based rollback.
- 2026 — present

LMS backend platform
CompilationLabLMS
 - Separated the browser BFF, internal service and storage boundary, with PostgreSQL as the source of truth.
 - Designed roles, learning workflows, a balance ledger, payment operations, verified webhooks and one idempotent completion path.
- 2024 — present

Creator and primary developer of Wist2
Open compiler/runtime project
 - Designing explicit module and capability contracts, manifest-driven runtime selection and semantically equivalent interpreted and CIL-compiled paths.
 - This work reinforced an invariant-first approach to subsystem boundaries rather than reliance on implicit conventions.

SKILLS

RECOGNITION

- LLVM-track technical selection
Technical selection result: 1st among 49 submissions, 5.0/5.0 and 104/104 tests on a memory-dependence analysis task.
- Olympiad and research-project results
Prize-winner of the HSE “Vysshaya Proba” Olympiad in industrial and competitive programming; highest-tier diplomas in the MEPhI Junior Research Competition in 2025 and 2026; winner of the...

EDUCATION

HSE University · Software Engineering · Faculty of Computer Science · bachelor's programme 09.03.04 · Moscow · Officially admitted; full-time studies begin in September 2026. Expected graduation: 2030.

SELECTED PROJECTS

- Reliability-focused backend

VpnMediator / Razaltush VPN
Backend for a commercial VPN service with subscriptions, entitlement, a unified Happ feed, HMAC device binding, Telegram payments and Linux operations.
 - the Mediator owns subscription and access state; Telegram UI and external providers do not become hidden sources of truth
 - idempotency, outbox/audit trail, recovery workers and reconciliation for unfinished operations
- Internal platform

CompilationLabLMS
BFF/InternalService architecture and PostgreSQL as the source of truth for an LMS.
 - PublicService BFF and InternalService/persistence boundary; PostgreSQL remains the source of truth.
 - Roles, groups, lessons, homework, a ledger, payment orders and verified webhooks.
