

Mikhail Razakov

Developer Tools Engineer

Since 2024, I have been developing Wist2 as a public tool for embedded DSLs and runtimes. I have also built a standalone program analyser, reproducible infrastructure for algorithmic tasks, an automation bot and diagnostic tooling for running services. I am currently completing an MCST engineering internship. I am strongest when complex internal logic must become a clear, testable and documented developer workflow.

Moscow / remote · HSE University, Software Engineering 2026–2030 · Available Sep 2026: internship / part-time · MCST Jul-Aug 2026

2024 — present
Wist2 public API, diagnostics, documentation and NuGet

104/104
standalone analyser with externally verified results

Production tooling
VPN diagnostics, OpenAPI and operator workflows

2026
MCST internship and C++23 task infrastructure

EXPERIENCE

2024 — present	Creator and primary developer of Wist2 Open language-tooling and runtime platform	- Designed the DSL pipeline, bytecode/AIR, interpreter and CIL backend, plus a public facade API for application developers. - Developing diagnostics, module and capability contracts, NuGet packages, examples, documentation and release checks. - Maintaining semantic parity across execution paths and negative tests so failures remain reproducible and understandable. - Exploring SSA and optimisations as optional capabilities without complicating the basic user contract.
Jul-Aug 2026	Engineering internship: algorithm-component infrastructure MCST · C++23 / CMake · LLVM track	- Maintaining a shared graph model, multiple executables and one reproducible test harness. - Implementing RPO, cycle detection, shortest paths, maximum flow and SCC algorithms. - Using strict warnings, sanitizers and static analysis while avoiding accidental transitive header dependencies.
2026	Standalone memory-dependence analyser MCST technical selection · C17	- Implemented a complete CLI tool: input parsing, normalisation, conservative reasoning and deterministic output. - Result: first among 49 submissions, 5.0/5.0 and 104/104 tests.
2026	Automation and diagnostic tooling Olympiad News Bot · VpnMediator	- Built a Telegram bot for monitoring olympiad channels with keyword and GigaChat filtering, without Selenium or browser cookies. - Added state diagnostics, admin checks and recovery workflows for a VPN service; investigated SQLite locking, certificates and environment incompatibilities.

ADDITIONAL EXPERIENCE

- 2023**
Client integration API
Private activation system · OpenAPI/Swagger
 - Implemented licensing endpoints and integration documentation with an explicit error model and administrative workflows.
 - Source code and client data are private.
- 2021 — present**
Programming tutor and mentor
About 50 students
 - Explaining program and tool behaviour, reviewing code and helping users localise errors.
 - Adapting interfaces and explanations to the user's level—a skill directly relevant to CLI design, diagnostics and documentation.

SELECTED PROJECTS

LANGUAGE TOOLING PLATFORM

Wist2

- Extensibility: dialect and runtime composition through explicit capability contracts

[GitHub](#) · [Documentation](#)

ANALYSIS TOOL

PS-form analyzer

Standalone C17 tool for classifying possible memory dependencies.

- Conservative yes/no/maybe result and safe behavior when proof is incomplete.

[GitHub](#)

TEST TOOLING

C++23 Algorithm-Task Infrastructure

C++23 task set with a shared graph library, CMake and a reproducible input/output test runner.

- RPO, Dijkstra, Dinic and Tarjan SCC.

[GitHub](#)

SKILLS

Core

C#, .NET, C, C++, Python, SQL

Compiler foundation

Lexer/parser/AST, bytecode/AIR, interpreter, CIL, graph algorithms, program analysis

Communication languages

Russian — native; English — technical documentation and written communication, with no claimed CEFR certificate.

Tooling

CLI design, configuration, OpenAPI, documentation, examples, release checks, automation scripts

Quality

Test runners, regression suites, semantic parity, diagnostics, logs, reproducible builds

RECOGNITION

2026 · MCST

LLVM-track technical selection

Technical selection result: 1st among 49 submissions, 5.0/5.0 and 104/104 tests on a memory-dependence analysis task.

2025-2026

Olympiad and research-project results

Prize-winner of the HSE “Vysshaya Proba” Olympiad in industrial and competitive programming; highest-tier diplomas in the MEPhI Junior Research Competition in 2025 and 2026; winner of the Computer Science track in the HSE “Vysshiiy Pilotazh” Research Competition.

EDUCATION & AVAILABILITY

2026-2030

HSE University · Software Engineering

Faculty of Computer Science · bachelor's programme 09.03.04

Moscow · officially admitted; full-time studies begin Sep 2026.

From Sep 2026

Internship or part-time role

Moscow / remote

Available after the MCST summer internship. I am looking for engineering...
