

Research-oriented CS student with professional compiler/static-analysis experience and hands-on C++/Python. I design controlled experiments, exact/reference oracles, randomized/metamorphic checks, and reproducible counterexample studies; my strongest current evidence is in algorithms, program analysis, and systems research.

Controlled experiments

UniversalToolchain: frozen corpus, valid controls, post-freeze holdouts, paired comparison, and repeated timing runs.

Mathematical & algorithmic reasoning

PS-form: normalization, modular/GCD reasoning, exact affine analysis, and an independent exact oracle.

C++ / Python research tooling

LLVM, Python harnesses, randomized/metamorphic testing, reproducible counterexamples, and differential execution.

| EXPERIENCE                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | SKILLS                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
