LinkedIn

Compiler/program-analysis engineer with professional LLVM experience and current symbolic-computation work in SharpChecker at ISP RAS and a historical Unity licensing project. Strongest inspectable signals are LLVM legality/transformations, x86-64 codegen/register allocation, and Roslyn data flow; protection experience is deliberately bounded to server-side key activation, activation limits, and Unity-client integration.

PROFESSIONAL EXPERIENCE

October 2026 — present

ISP RAS — SharpChecker development

- Work on symbolic computation in SharpChecker, a C#/.NET static-analysis tool.

July — August 2026

MCST — Compiler Engineering Intern

- Implemented a LICM pass for LLVM 22 in C++; hoisting conditions check loop structure, memory access, side effects, and speculative safety.
- Built a Python harness comparing program behavior before/after optimization and checking transform/no-transform cases.

Independent work (not employment) — Unity licensing prototype: server-side key activation and limits; VpnMediator: subscription/access state and recovery. Neither project is represented as an employed role.

PROJECTS

LLVM Interprocedural Global IV Optimization

An LLVM 22 pass localizes supported induction-like globals after interprocedural effects/affine analysis and a separate legality decision; APInt models fixed-width wraparound.

29 positive/negative regression cases: global-iv,verify, structural expectations, idempotence, and observable before/after execution comparison.

x86-64 Compiler Backend & Register Allocation

A compiler backend with SSA/CFG validation, liveness/interference analysis, linear-scan and seeded simulated-annealing allocators, spills, phi lowering, and a SysV x86-64 emitter.

An independent assignment verifier plus native-vs-interpreter differential execution; tests cover branches, loops, spills, and parallel phi moves.

DerefAfterNullAnalyzer

A Roslyn ControlFlowGraph analyzer propagates null state over conditional edges to a fixed point, handles loops/back edges, and merges states from multiple predecessors.

Handles method/property/index/event dereferences and invalidation after assignment/ref/out; dedicated analyzer tests use Microsoft.CodeAnalysis.CSharp.Testing.

SKILLS

Compiler / LLVM
C++23, LLVM 22/IR, interprocedural analysis, legality, transformations, LLVM Verifier

Program Analysis
Roslyn CFG, fixed-point data flow, state propagation/joins, conservative analysis

Low-Level / Codegen
Rust, SysV x86-64, liveness/interference, register allocation, spills, phi lowering

Software Protection / Licensing
server-side activation, activation-count limits, Unity integration

EDUCATION

HSE University — Software Engineering, 2026–2030

RECOGNITION

MCST LLVM/C++ selection
Organizer correspondence: only 5.0/5.0 score and only solution passing all 104/104 tests among 49 submissions.

LangDev'26 — Build the Language, Then Make the Abstractions Disappear
Delivered the UniversalToolchain architecture talk at LangDev on 9 October 2026.

HSE Faculty of Computer Science — open-source projects competition
Selected as one of the winners with UniversalToolchain / Wist2.

Earlier distinctions
MEPhI Junior: Information Technologies section winner in 2025 and first-degree diploma in 2026; HSE Vysshaya Proba Industrial Programming diploma holder; Baltic Science and Engineering Competition: first-degree diploma and the "Perfection as Hope" prize.
