

I built experimental PlanFuzz with a language-neutral core, an Acme adapter, a restricted Wist Int32 adapter, seven oracle families, fresh-process replay, exact fingerprints, and deterministic program/plan reduction.

7 oracle families

backend/route parity, determinism, surface, extensions, fallback, locks

Fresh-process evidence

typed observations, exact fingerprints, replayable artifacts

Deterministic reduction

program + plan; preserves the original exact fingerprint

EXPERIENCE

- 2026 — PRESENT

PlanFuzz

 - Language-neutral core, an Acme adapter, a restricted Wist Int32 adapter, and structured generators.
 - Strict outcome/evidence semantics, fresh-process confirmation, and deterministic reducers.
- 2024 — PRESENT

Wist tooling

 - Typed APIs, structured diagnostics, versioned traces, and interpreter/CIL parity.
 - Canonical gate: 1,465/1,465 tests, nine packages, a clean template, and a cross-package consumer smoke.

SELECTED PROJECTS

- PS-form Harness

Exact oracle, metamorphic generation, strict stdout, timeouts, and WA/TL counterexamples.
- AdvancedAlgorithms Verification

Differential oracles, structural invariants, invalid-input cases, sanitizers, and stress tests.
- x86 Backend Validation

IR-interpreter/generated-code parity, disassembly, and isolated execution.

SKILLS

- Testing

differential/metamorphic, oracles, replay, reducers
- Diagnostics

stable codes/stages, typed traces, counterexample artifacts
- Release

package surfaces, clean consumers, manifests, CI
- Languages

C#/.NET, C++23, C17, Python, Rust

EDUCATION

Software Engineering student at HSE University

RECOGNITION

HSE Vysshaya Proba prize-winner; top MEPhI Junior results in 2025/2026; Baltic Grand Prize.

TECHNICAL COMMUNICATION

Technical documentation, reproducible reports, and code review.

AVAILABILITY

Moscow / remote · up to 20 hours/week from September 2026
