

Mikhail Razakov

.NET Backend Engineer · Reliability & Operations

I design and support .NET services that must preserve correct state across retries, migrations and failures. My hands-on work includes subscriptions, payments, audit trails, background recovery, backups, health checks, versioned releases and rollback. This experience is complemented by a client licensing API, the open Wist2 compiler/runtime project and an MCST engineering internship.

Moscow / remote · HSE University, Software Engineering 2026–2030 · Available Sep 2026: internship / part-time · MCST Jul-Aug 2026

2 products
post-launch operation of a VPN service and LMS

Recovery
idempotency, outbox, audit trail and background workers

Release
backup/restore, health checks, versioned rollout and rollback

Broader base
Wist2, a client API and an MCST internship

EXPERIENCE

2026 — present	Subscription-service backend and operations VpnMediator / Razaltush VPN	- Designed access rights, subscription and device lifecycles, a single source of truth and HMAC device binding without storing the raw hardware identifier. - Implemented payment state machines, idempotency, outbox, audit trail and background recovery of unfinished operations. - Maintained migrations, diagnostics, systemd/nginx, backup/restore, versioned deployments and health-check-based rollback. - Investigated operational failures and improved operator workflows based on observed service behaviour.
2026 — present	LMS backend platform CompilationLabLMS	- Separated the browser BFF, internal service and storage boundary, with PostgreSQL as the source of truth. - Designed roles, learning workflows, a balance ledger, payment operations, verified webhooks and one idempotent completion path. - Maintained Docker Compose/nginx contracts, backup tooling and deployed-environment checks for critical flows.
Jul-Aug 2026	Engineering internship: C++ component quality MCST · LLVM compiler-development track	- Developing a shared graph model and algorithmic C++23 components with controlled dependencies. - Validating builds and behaviour through CMake, input/output tests, strict warnings, sanitizers and static analysis.
2024 — present	Creator and primary developer of Wist2 Open compiler/runtime project	- Designing explicit module and capability contracts, manifest-driven runtime selection and semantically equivalent interpreted and CIL-compiled paths. - This work reinforced an invariant-first approach to subsystem boundaries rather than reliance on implicit conventions.

ADDITIONAL EXPERIENCE

2023	Client licensing API Private project · ASP.NET Core / OpenAPI	- Implemented key issuance and validation, activation states, an explicit error model and an integration contract. - Added administrative flows that do not require manual state editing.
2021 — present	Tutor and reviewer of programming projects C/C++, C#, Python and algorithms	Diagnosing problems, reviewing code and explaining root causes—experience directly useful in incident investigation and engineering handover.

SELECTED PROJECTS

RELIABILITY-FOCUSED BACKEND

VpnMediator / Razaltush VPN

- State ownership: the Mediator owns subscription and access state; Telegram UI and external providers do not become hidden sources of truth

[Public showcase](#)

INTERNAL PLATFORM

CompilationLabLMS

BFF/InternalService architecture and PostgreSQL as the source of truth for an LMS.

- PublicService BFF and InternalService/persistence boundary; PostgreSQL remains the source of truth.

[Open LMS](#)

RUNTIME INFRASTRUCTURE

Wist2

Modular .NET runtime/DSL platform with manifest-based backend selection and multiple execution paths. The platform lets a .NET application accept restricted formulas and DSLs, validate them before execution, interpret them for diagnostics, and compile supporte...

- Module contracts instead of implicit dependencies.

[GitHub](#)

SKILLS

Backend platform

ASP.NET Core, REST APIs, BFF/InternalService boundaries, authentication and authorization, background workers

Operations

Linux, Docker/Compose, nginx, systemd, logs, health checks, backup/restore, rollback

Communication languages

Russian — native; English — technical documentation and written communication, with no claimed CEFR certificate.

State & data

PostgreSQL, SQLite, transactions, ledgers, idempotency, migrations, audit trail

Validation

Integration smoke tests, fake adapters, recovery scenarios, production contract checks

RECOGNITION

2026 · MCST

LLVM-track technical selection

Technical selection result: 1st among 49 submissions, 5.0/5.0 and 104/104 tests on a memory-dependence analysis task.

[Solution](#) · [Internship program](#)

2025-2026

Olympiad and research-project results

Prize-winner of the HSE “Vysshaya Proba” Olympiad in industrial and competitive programming; highest-tier diplomas in the MEPhI Junior Research Competition in 2025 and 2026; winner of the Computer Science track in the HSE “Vysshiiy Pilotazh” Research Competition.

EDUCATION & AVAILABILITY

2026-2030

HSE University · Software Engineering

Faculty of Computer Science · bachelor's programme 09.03.04
Moscow · officially admitted; full-time studies begin Sep 2026.

From Sep 2026

Internship or part-time role

Moscow / remote

Available after the MCST summer internship. I am looking for engineering...
