

I design .NET services where state correctness and recovery matter: REST/OpenAPI, payments and webhooks, PostgreSQL/SQLite, idempotency, migrations, background recovery, backup/restore, and safe rollback.

State invariants

Subscriptions, payments, balances, roles, access rights, and devices

Failure recovery

Idempotency, audit trails, reconciliation, restart safety, and background operations

Verifiable releases

Migrations, health gates, Docker/nginx/systemd, backup/restore, and rollback

EXPERIENCE		SKILLS
2026 — present	VpnMediator — subscription VPN backend - Designed access, subscription, payment, and device lifecycles; handled repeated webhooks and operations idempotently. - Implemented auditing, background recovery, migrations, backup/restore, diagnostics, and safe rollback.	Backend C#/.NET, ASP.NET Core, REST, OpenAPI, webhooks, background services Data PostgreSQL, SQLite, transactions, migrations, state machines, balance ledgers Reliability idempotency, audit, reconciliation, restart safety, recovery, backup/restore Operations Docker Compose, nginx, systemd, health gates, versioned releases, rollback
2026 — present	CompilationLabLMS — learning-platform backend Built roles, learning workflows, balance operations, and critical payment paths with explicit invariants and checks.	
2023	Client licensing backend Defined activation states, explicit errors, API contracts, and operator-safe administrative workflows.	
PROJECTS		EDUCATION
VpnMediator A production service with controlled state transitions, backup/restore, health gates, and safe rollback; the public case study excludes secrets and user data. CompilationLabLMS The architecture separates user workflows from financial invariants and supports safe migration and rollback. UniversalToolchain / Wist2 1,465/1,465 tests with zero failures across nine packages and clean-consumer projects, plus interpreter/CIL parity and reproducible configuration checks.		Software Engineering student at HSE University RECOGNITION The LangDev 2026 Program Committee accepted a talk on the architecture of UniversalToolchain/Wist2 for presentation in Torremolinos, Spain.
